Expectations

# Intelligent Enterprises

The Intelligent Enterprises are “Modern Enterprises” adopting cutting edge intelligent tools for data management, customer experience, people engagement, manufacturing & supply chain, network & spend management to become sustainable, resilient and profitable.

The Intelligent tools are powered by **Cloud based – AI/ ML, Cloud Integration, Robotic Automation (HyperAutomation), IoT, ChatBots, VR/ AR and others** to optimize process, reducing manual dependency, maximizing resources utilization and igniting innovations.

Design

Deliver

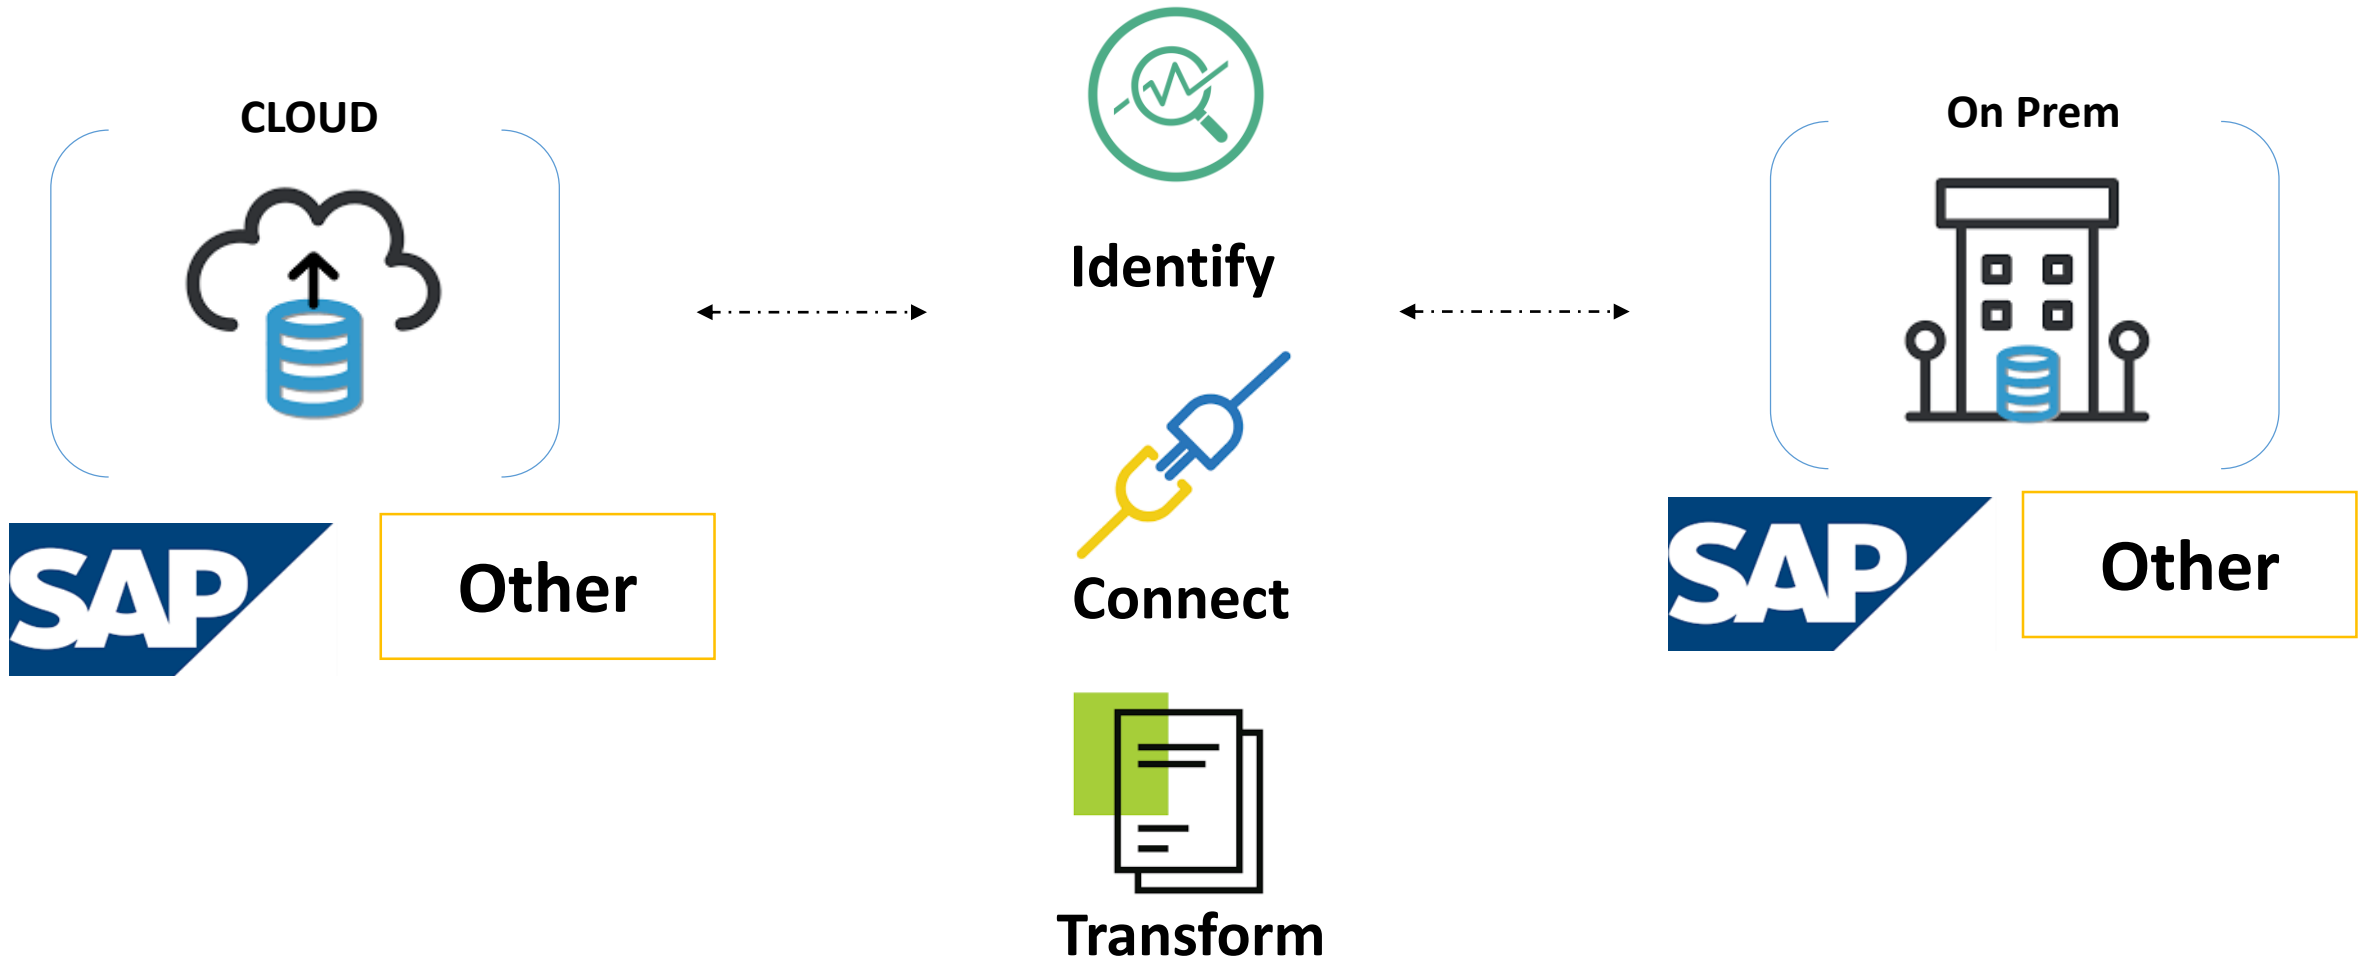

# Existing Process Challenges

- System bottlenecks
- Complicated IT infrastructure (cloud/ on premise applications)
- High valued process cost
- Improper utilization of resource
- Siloed processes
- Repetitive, mundane jobs
- Loss of data, human errors
- Employee demotivation

Waste of data & time values,  
hampering profitability, OPEX  
& CAPEX

# Process Optimization

# Connect & Optimize

- Data Orchestration across Line of Businesses (LoBs)
- Extend & Adapt standard application flows
- Aggregate data between complicated IT infrastructure
- Secure data transmission
- Better visibility into inefficiencies
- Achieve Operational excellence
- Connect popular third party cloud and on premise applications
- AI enabled processes
- Quickly implement pre-build content to save time
- Solve common integration challenges and bottlenecks
- Connect A2A, B2B etc. scenarios with real time transmission
- Building future proof IT landscape
- Increase compliances and faster time to market
- All time system availability
- Agile and elastic system
- Improve customer service, support and retention
- Increase competitive edge
- Reduce OPEX and increase revenue cycle

# Process Intelligence

Get connected with other departments/ inter-department using workflow messaging and assistance.

Connect from mobile devices, desktops using Chatbot, portal, user interface

Run digital assistance in the background or person will start it in the foreground (RPA+AI/ML)

Connect to various cloud/ on premise applications including SAP or non-SAP

# Hyper-Automate & AI/ ML

- Robotic Automated transactions with Hyper-Automation
- Excellent role based workflow management
- Connect cloud and on premise applications
- Data transmission
- Increase work efficiency
- Raise employee satisfaction index
- Automate high volume and low complexity tasks
- Reduce daily manual and repetitive processes
- AI/ ML enabled processes
- Interactive assistance with Chatbot
- Saves ours of work
- Higher asset utilization of value chain
- Bring down operational cost
- Time to value with easy on-boarding of system
- Increase compliances
- Error free processes
- 24X7 availability of bots and workflows
- Low TCO

# Process Mobility

Day to day  
work on the fly

Android based apps to  
connect SAP/ non-SAP,  
on premise or cloud  
servers

# Enterprise Mobility

- Mobility in processes
- Real time business run and notification
- Accelerate business values
- RFID/ Barcode integration
- Connect to SAP/ non SAP systems
- Robust and smart mobility
- Implement real time lean practices

# Technology Offerings

- SAP Workflow Management
- SAP Process Automation
- SAP Conversational AI (ChatBot)
- Android Development
- SAP BTP (Business Technology Platform)
- Document Extractions
- API Management

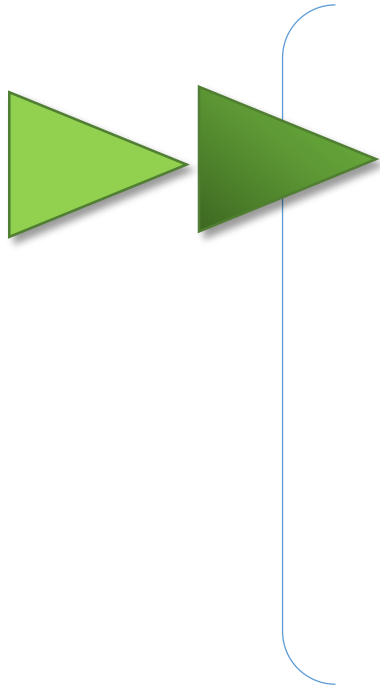

## Additional Services:

- Cloud Enablement
- SAP UI/ UX development
- SAP AppGyver
- SAP Signavio/ BPM tools

*free up between 15% and 30% of an employee's time to focus on tasks that deliver greater value to the organization and improve the customer experience*
